Born to be the ultimate spy; Firage rather puts his talents to use in a different way, as a deadly warrior, always at the first line of a battle. His ability for stealth, including hologram projection and electromagnetic absorption allows him to become practically invisible and move silently, to strike his enemies from the best position with his two lethal arm blades and retractile claw whips. Combine that with the speed of his supercar mode and you get a one-robot-ninja-force!

Evil mechs, beware! You won't see Firage coming, until it's too late!
